João Guilherme Fonseca

Full-stack developer — Vila Velha, ES, Brazil

me@joaogf.dev joaogf.dev linkedin.com/in/joaogfonseca github.com/JoaoGFdev

Summary

I'm a full-stack developer who builds products end to end: web and mobile interfaces, databases, integrations, infrastructure, and AI features in production. I work mainly with TypeScript, React, Next.js, React Native, Node.js, and Supabase, with a close eye on architecture, access security, cost, and quality. I also enjoy building small command-line tools that automate manual, repetitive processes, turning a tedious step-by-step into a single guided command.

Experience

Full-Stack Developer

Mar 2026 | Present

Acelera Concursos · Full-time | Hybrid · Brazil

- Build and maintain a study-schedule platform for exam preparation, a multi-tenant education SaaS with a web dashboard for students, teachers, and internal operations.
- Built the students' AI tutor: streaming chat, search restricted to the content each student can access with source citations, image input with private storage, and atomic per-model token reservation to keep costs under control.
- Created the chat's subscription plans, with daily limits, price caps, per-plan cost metrics, and a model catalog with change history, integrating two AI gateways (Vercel AI Gateway and OpenRouter).
- Implemented per-school subdomains with central login, role-based permissions (RBAC) and tag-based content access, database security with RLS, user provisioning webhooks, and blocking of delinquent accounts.
- Shipped features such as courses and schedules, mock exams with rankings and corrections, flashcards, mind maps with PDF export, and reports, plus the payment integration.
- Maintain a self-hosted Plunk instance on AWS SES for transactional email and campaigns, handling configuration, sending quotas, bounces, and cost alerts.

TypeScript, Next.js, React, Supabase, PostgreSQL, Vercel AI SDK, Vercel, Cloudflare, Plunk, AWS SES, Docker, Git

Mobile Developer

Mar 2024 | Mar 2026

Slabware · Full-time | Onsite · Vila Velha, ES, Brazil

- Developed and scaled React Native / Expo apps, refactoring legacy code and shipping new features with a focus on performance and UX.
- Led state management migration from Redux to Zustand, adopting a leaner, more modern approach that reduced boilerplate and improved maintainability.
- Maintained high coding standards through peer code reviews and consistent TypeScript usage.

Expo, React Native, Zustand, Typescript, Git

Frontend Developer

Oct 2023 | Mar 2024

BeeBee · Full-time | Remote · Vitória, ES, Brazil

- Built a real-time operations dashboard in React.js and TanStack Table for internal teams to monitor deliveries end to end, including request status, driver acceptance, SLA timing, and operational issues.
- Implemented live delivery-status updates via Websockets with Pusher, allowing employees to track changes instantly without manual refresh.
- Worked on a delivery flow where clients requested deliveries through the app and drivers accepted jobs on mobile, ensuring the dashboard accurately reflected each stage of the operation in real time.

React, TanStack Table, Websockets, Pusher, Typescript, Git

Frontend Developer Nov 2022 | Oct 2023

Grupo GMill · Full-time | Onsite · Serra, ES, Brazil

- Led the full migration of a legacy Angular application to a modern React + TypeScript + Tailwind CSS stack, improving performance and developer experience.
- Built and refined responsive React + TypeScript interfaces during the migration, improving usability and maintainability across internal workflows.
- Optimized applications for speed, maintainability, and responsive design across devices.

React, Typescript, Tailwind, Git

Backend Developer Mar 2022 | Nov 2022

ATW Delivery Brands · Intern | Onsite · Vitória, ES, Brazil

- Developed REST APIs with Node.js and Express; integrated databases with Prisma ORM.
- Prototyped a real-time chat feature using Socket.io — directly relevant to Websocket-based communication.
- Wrote automated tests with Jest, reinforcing a culture of quality and testing best practices.

Node.js, Express, Prisma, Socket.io, Jest, Git

UVV · Vila Velha, ES, Brazil

I started in game development with Unity and moved into backend work.

> **Backend / VR Developer** Sep 2021 | Mar 2022
>
> Scholarship | Onsite
>
> - Built a .NET API for a virtual reality research project; developed UI prototypes in Unity with C#.
>
> **Game Developer** Jul 2019 | Sep 2021
>
> Volunteer | Onsite
>
> I joined a virtual reality project where I learned Unity with C#. I focused on UI prototyping and gained hands-on experience in game development and UX design.

Projects

Playlist Bridge

Web app that copies playlists between Spotify and YouTube. It surfaces music-video matches for review, creates private playlists, and resumes transfers interrupted by API quotas or dropped connections.

TanStack Start, Clerk, Drizzle, Cloudflare Workers, D1

Automation tools

I like building small terminal tools that simplify manual processes in my daily work, such as importing content, managing email campaign audiences, setting up development environments, and processing videos. Each one replaces a tedious, error-prone checklist with a single guided command.

Node.js, TypeScript, Python, Clack, Vitest

Skills

Frontend	TypeScript, React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, TanStack Table
Mobile	React Native, Expo, Zustand
Backend and data	Node.js, Supabase, PostgreSQL, tRPC, Drizzle, Prisma, Python
AI	Vercel AI SDK, AI Gateway, OpenRouter, RAG
Infrastructure	Vercel, Cloudflare, AWS SES, Docker, Git

Education

Bachelor's degree in Computer Science Jan 2018 | Dec 2023

University of Vila Velha | UVV · Vila Velha, ES, Brazil
